PLANET

PLANET

We truly believe the only way forward, is the green way. At GTA Belgium, we are constantly looking for new ways to make our fabrics more sustainable. With PlanET, we aim to offer you ecofriendly fabrics that will withstand the test of time.

A part of our range of PlanET-fabrics is produced with special yarns that are obtained through shredding old PET bottles. Next to that, we also offer fabrics for headboards and bed bases that are made out of 100% polypropylene, which means that they are completely recyclable!

Take our Alexandra-REC. This is the eco-friendly sister of our Alexandra range. A perfect example of how we can offer you a sustainable alternative with the same quality of a standard fabric. All of our 100% virgin polyester fabrics are also available in a version made out of recycled PET bottles.

Our Vision-01 fabric is entirely crafted in-house out of our own polypropylene yarns. Polypropylene can be recycled up to 10 times! The yarns in this fabric are solution dyed, which means that we save up to 95% of water compared to the traditional dyeing process.

**WE ONLY HAVE
ONE PLANET EARTH!**
